THE TINY MICRO COMPUTER NEWS SERVICE

July 10, 1980

Dear Bob:

It's hard to believe, but all six issues of Volume I have been completed!
This has been a tremendous learning experience for us.

We have conquered many problems that seemed at times to be insurmountable.

1. Each new issue leaves our offices on the 10th of each month.
2. Our programs are error free.
3. We do not print programs without complete operating instructions.
4. We never discuss a scheme or product until we have it working, and in our hands.
5. We do not print advertisements for products that we consider to be a rip off.
6. We have been the first to print vital tutorials that enable you to use the versitility of the Bally (3 voice music, DMA, etc.).

We appreciate your having had the courage to become one of our first sub-
scribers. We made our share of mistakes along the road, but have done our
utmost to alleviate them.

Our upcoming issues will be even better than in the past. Among the many
articles to be published will be:

A. New Keyboard Tutorial: Complete step by step instructions with professional schematics and text written by engineers.
B. How to add a Bit Pad to the Bally.
C. Voice Synthesization.
D. Expanded issue size.
E. Adding Memory.

In a way of showing you our appreciation, we are offering you a 10% discount
on all of our products (except Mother Boards) including your re-subscription
of $9.75.

To receive your 10% discount, merely have your order postmarked prior to
August 1, 1980.

In any case, we would appreciate hearing from you along with any suggestions
you might have on how we could improve our service to you or issue content.

Sincerely,

CURSOR

Fred Cornett
