from ASTROVISION

more games

Developed by the leader in commercial arcade games, the Bally ARCADE is now available from AstroVision.

Software includes the Bally classics: Gunfight,™ Checkmate,™ Astro Battle,™ Football, and many more. New cartridges now in production will continue this leadership with the best in sports, space simulations, and strategy games.

The ARCADE maintains its leadership because it is more interactive, with the only 8-way joysticks with knob and trigger. More colors with 256 choices. Three octave music and sound effects synthesizer. And highest realism with fast action and the best software designs in the business.

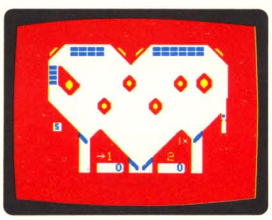
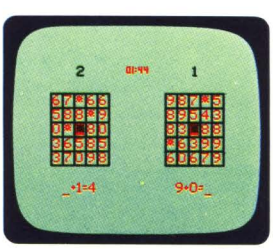
2014-Grand Prix



3005-Bally Pin™ *

4003-Music Maker I



4001-Bingo Math™ *

more fun

The most fun game of all is learning to create your own computer programs. Now there's no easier way to learn about computers than with the new Bally BASIC system. This plug-in cartridge with built-in audio tape interface converts the ARCADE into a personal computer you can program yourself. An optional self-teaching system makes it easy to learn programming while creating computer games, electronic music, and video art. The library of BASIC software on inexpensive cassettes expands these applications, and teaches more advanced programming techniques.

...more to come

With the plug-in ZGRASS-32 keyboard, the ARCADE becomes the easiest computer to use and the most powerful system available for creating graphics on the TV screen.

In addition to meeting standard business and home computing requirements, the ZGRASS-32 computer also provides extended capabilities for creating graphs and visual displays, interactive teaching systems, advanced video games, business simulations, electronic music, TV commercials, video titles, and animation.

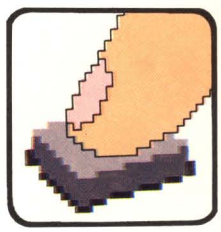
Custom computer chips, specially designed software, and 32K additional RAM make this system so easy to use that BASIC programming experience is not required. The full power of this creative instrument is easily learned through its built-in teaching system. Expansion modules include disks, drawing tablets, monitors, light pens, and a host of RS-232 accessories.

EXCLUSIVE #1.

Only the ARCADE computer system offers a self-teaching course that lets the user create short programs after the first few minutes. The first lesson shows how to operate the computer and how to play dozens of games with the 30 exciting programs included. Other lessons teach how to create video games, art and music.

EXCLUSIVE #2.

Only the ARCADE computer system permits users to program the computer without knowing how to type a single word. Anyone—even children—can use the ARCADE'S built-in keypad. It's actually *faster* and *easier* than typing.



EXCLUSIVE #3.

Only the ARCADE computer system includes symbols and words such as "line" and "box," giving complex commands that permit games and art to be created swiftly. No need to spend hours programming in order to enjoy this equipment. A few quick instructions with Bally BASIC and the fun begins.

EXCLUSIVE #4.

Only the ARCADE computer system includes a built-in music synthesizer with 3-octave range. Numbers correspond to musical notes. So "Play by the Numbers" songbooks can be followed to produce beautiful electronic music. Or original tunes can be composed and played.

EXCLUSIVE #5.

Only the ARCADE computer system utilizes the full electronic palette of 256 colors. That's the full color range of a color TV set. Personal computers usually are limited to black-and-white, or up to 16 colors at most.
