****BALLY BASIC GAME PROGRAMS****

+++ All games come with listings !+++

Minimum order- 2 programs. All games start automatically after loading.
On your cassette, subtract \$1 from order

UFO BATTLE- 1 or 2 players. On screen instructions.
The UFO is a different shape every time you destroy
one. This game has very dramatic explosions, utilising
color, graphics, & sound. It's not easy, since the
UFO can also fire at you. Bytes of memory left--SZ=~~1~~.3
\$3.95

DOWN THE TRENCH- 1 player. 6 levels of difficulty.
There are many branches to this program. It may take
you an hour to finally destroy the DEATH STAR and
move to a higher level of difficulty. After you evade
the enemy's lazer shots, you engage your flight com-
puter and wait to fire as a 3-dimensional represen-
tation of your target moves up on you. But that isn't
all!! Spectacular explosions & graphic movement along
with more documentation than other programs, make
this a unique game. Memory-SZ=~~1~~.3 \$5.50

HIT THE PEDESTRIAN- 1 player. On screen instructions.
This program is 85% graphics. Your car speeds down a
road and a pedestrian pops up, rotate your knob to the
center of your bumper and run him over for points,
aiming him carefully. Be careful though, you may hit a
tree!! Fun, but not easy. Memory-SZ=~~1~~2 \$3.95

SUBMARINE MINEFIELD- 1 or 2 players. On screen instruc-
tions. Navigate your sub through a dense minefield and
around 3 moving depthcharges! It takes a while to get
through & gain points, so concentration is needed. Good
sound effects & graphics. Memory left-SZ=~~1~~. \$3.95

T. HAYS

MUNCH!- 1 player. On screen instructions. You are eating a cookie & gaining points with every bite, but there is a poison rasin randomly placed in it. If you win, the computer shows you where the rasin was. Good sound effects & color changes along with suspense. Bytes of memory left--SZ=525 \$2.95

SUPER WUMPUS- 1 player. 2 programs. these programs come on their own cassette..One side with instructions & game, other side with game only (for convenience in loading once you learn instructions) The WUMPUS is the creature you seek, he lives in a maze of caves with disasters waiting for your encounter. This game is unique because it doesn't use the RND feature too much as to ruin the game; it takes strategy & intelligence!! It never gets boring because its different every time you play it, with many branches and subroutines. Excellent sound effects and problems which pop up when you least expect them make this an exciting simulation/game. Memory left-SZ=3. \$8.95 complete!

I also have special application programs for education purposes...in the areas of; electronics, physics, engineering, finance, statistics, & mathematics.

The first of these programs is called- MATH ROUTINES- it accurately calculates these routines: Sine, Cosine, Arctangent, & Square Root. These calculations are needed for doing 3-Dimensional programs! Included with the program is a list of each routine and instructions on using them. Memory-SZ=713. Calculations are accurate to .01 degrees, usually much better.
\$2.50 complete

If you are a teacher, or just have a interest in one of these areas, write or phone me & let me know what area(s) you need and I'll send you a list, or design a program to fit your needs. Price of these programs are \$2.50 with documentation.

New games & programs will be announced after they've been scrubbed down and de-bugged.

If you send me one of your cassettes for me to record on, be sure you have enough room for 2½ minutes per program.

I also accept programs for trade, let me know what you have and what you think it's worth. My programs are very complicated, to the extent of memory, and are well documented.

NOTE: Money Orders speed up processing.
