Robert Fabris:

~~Alud broke BASIC~~

The information you sent me is quite useful; especially Volume 1 of the Arcadean and the Assembly Language listings. I almost have enough pieces to consider writing a game program.

I am toying with the idea of writing a simple version of Dungeons & Dragons in assembly language as a first attempt. IF I pull it off I will send (you) a version (on 2716 EPROM) which could be plugged into a modified game cartridge (chip removed & replaced with socket; hole cut in top of cassette case for easy program changes). You could distribute it to readers at a cost you felt right for reproducing it (2716's only cost about $7.50 now + readers could supply their own), I would be doing it for fun not profit.

However, there is one item you have which would be of immense help: the 340 page document of Bally Monitor Listings + Subroutine Calls. Please send me pricing for a copy or rental fee for me to Xerox it & return your original. Thanks.

sincerely

Barry

Barry McCleave

P.S. I readded my figures + believe I short-changed you $1. It is enclosed. Z-Grass system looks good!
