

Dear Bob,

First, I have to apologize for a typing mistake in Simon. Lines 70, 80, 90, ~~100~~ and 100 should be modified to.

```
70 for x=1 to A
80 gosub @ (x) * 1000
90
100 } delete
```

This should take care of the bugs in that program.

Many people (40 or so) have called!! to ask me how to fix the program ^(Simon). I expect many letters coming. I think I know how you feel now with everyone writing or calling you - (You must be busy).

Many of the people that have called have commented that the asterisk (*) does not work, also =, O and Ø, and other computer notations. Perhaps, for the benefit of less ~~to~~ experienced users, a short note that would explain what these mean would be helpful.

Please ask the people to write and not call, since this ties up the phone for the rest of my family. I will answer any letters, as best I can, on any questions users think I can answer. (Programming tricks, interfacing, programs, ~~and so on~~ -). But as long as they call, I'm swamped!! Any user can write cheaper than a long distance phone call anyway.

How did they get my number?
They must really be interested, and that's good!

I really will try to help them as best I can.

Along the lines of Phone calls, a user in this area is trying to send programs over the phone to me. If this works, this may be easier than sending cassettes.

IMPORTANT

Enclosed is a flyer for the Computer Center. We are starting discussion groups for users in this area. People have called and said they will come half-way across the state to attend a meeting. So MAY 12 at 2:00 we plan to hold a users group meeting for this area. If possible, perhaps you can announce this to users who would be interested in coming. I promise I will write and tell you how it turns out.

The sin program should be very useful.

I'm sending two programs this time. One short functional program, sin subroutine, and one game, othello. (NO mistakes, I Hope!)

I'm sorry that I have not been able to go over your bulletin for #6. But perhaps my sin Subroutine can be included as a tool?

Program descriptions ^{are} with listings.

I'll try to send more programs soon.

Sincerely
Britt Billrey

(P.S. my pen Ran out of ink)
