1. Yes <sup>F/A0</sup>

✓ 2. Yes

3. Yes (?)

I bought the Bally with the idea of expansion to a full micro later. With ZGRASS or GRAFIX it would be better than Apple/PET/TRS/OSI etc. Bally should finish the system as planned. It could be one of the best.

If option #3 is forced by a Bally default will it be properly designed, bug free? If we can be assured of a good unit, I would definitely be ready & willing!
