DEAR ROBERT,

I JUST RECEIVED THE DECEMBER ISSUE OF THE ARCADIAN AND NOTICED THE ARTICLE "SLAP ON A KEYBOARD". WELL I BUILT A KEYBOARD THAT CONNECTS VIA 10 WIRES IN PARALLEL WITH THE BALLY KEYBOARD.

IT IS A RELAY OPERATED UNIT USING IT'S OWN 5VDC POWER SUPPLY AND IS ISOLATED FROM THE BALLY VIA THE RELAY CONTACTS. YOU NEED ONLY OPERATE ONE KEY FOR LETTERS, WORDS STILL NEED TWO KEY'S, A SHIFT AND WORD KEY. IT COST ME ABOUT \$150.⁰⁰ IN PARTS TO MAKE IT. I HAD TRIED TO SELL IT IN THE MICHIGAN NEWSLETTER WITH NO LUCK.

(2)

I WAS ASKING \$100.00 FOR IT
OR SOMEONE TO MAKE AN OFFER.
IF YOU KNOW OF ANYONE THAT
WOULD BE INTERESTED OR IF YOU
HAVE ANY QUESTIONS YOURSELF PLEASE
CALL OR WRITE.

SINCERELY,

MICHAEL PAWLOWSKI
9294 QUANDT

(313) 388-2162.

P.S. I CAN NOT BELIEVE THE IDEA I
USED COULDN'T BE USED USING A
SMALL PROCESSOR TO DO THE SAME
THING.

- ALSO THIS ADD-ON KEYBOARD DOES
NOT INTERFERE WITH THE NORMAL
KEY PAD FOR GAMES.
