ARCADIAN
3626 Morrie Drive
San Jose, CA 95127

Dear Bob,

First let me say how impressed I am with the three issues of Arcadian that have been received. You are doing an excellent job and I wish I had gotten on the bandwagon sooner. Issues #7,8, and 9 have been received. I would dearly love to have Issues #1 thru 6. Are they available? I will be happy to pay for them.

Second, two copies of Issue #9 were received. If you have automated your mailing, perhaps this was a so called "computer error." If so, a little human intervention may be required.

In Issue #7 you offer a 50 pin connector for \$2.50. I am enclosing a check for \$5.00 for one connector; the other \$2.50 to defray costs of mailing the back issues if available. If neither connector or back issues are available use the check to further your good work.

In response to your survey in Issue #8:

1. Maybe
2. Yes
3. Yes

I have an OE1000 ASCII Keyboard and Video board made by Otto Electronics. I am presently trying to hook it up to an Intel 8085 micro. Trouble is a severely limited memory. Am eventually going to try to hook into the Bally Z80 micro but will need about 64 K of memory and a good Basic. My Bally is Model #BPA1100, Serial #5233, and is equipped with the Bally Basic and the tape interface.

Thanks for your consideration in the above matters, and again, you are doing a fine professional job.

Yours truly,

Tom Foster
