

Bally PROFESSIONAL

ARCADE™

The fun lives on!

Still the leader in video game technology . . . the Arcade features the games people want to play most. With three built-in games and Color Calculator, the Arcade gives your customers the best home video game value for the price.

Custom graphics and advanced sound computer chips keep the Arcade years ahead of all the competition . . . and the continuous flow of the latest games on Videocade cartridges, means the Arcade will stay years ahead.

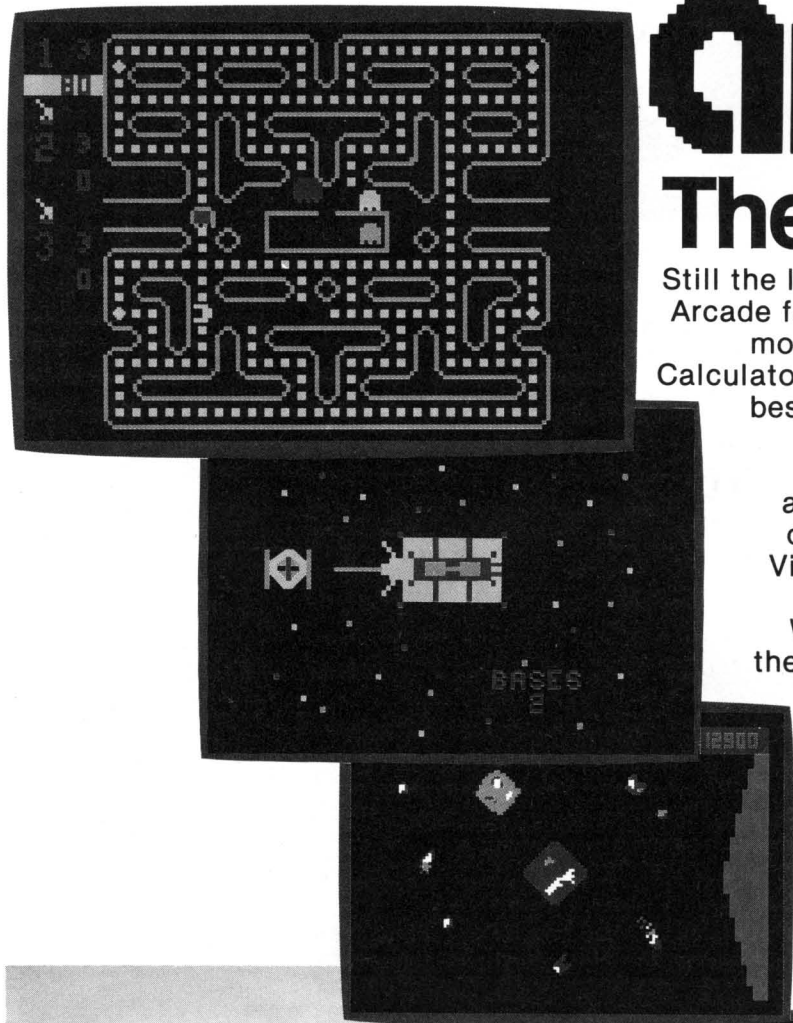

With the BASIC programming cartridge the Arcade becomes a real computer that customers can program themselves.

Soon, the ZGRASS-32 computer keyboard will expand the Arcade into the most powerful personal graphics computer available anywhere . . . and

the easiest to use. With up to

64K additional RAM and RS232

expansion capability, the Arcade system will grow as large as your customers imagination.

To see the expanding line of Videocade cartridges and Arcade accessories, visit us in Booth 940 at CES in Las Vegas.
