For the Bally/Astrocade we are releasing in 3rd quarter of 1996 an add on
board that provides up to 64 K of user configurable RAM, EPROM or EEPROM, an
input for inexpensive readilly available keyboard, an output for Centronics
type printer and two serial ports for connecting to a modem or another
computer. We hope to bundle this with Hot-Rod Bally Basic. Hopefully the
PS/2 keyboard input will relieve your masochism. We are planning on bundling
32K of RAM installed and perhaps 8K of EEPROM. Pricing has not yet been set.

You may have already seen this response for Bally Add-On info, if so please
accept our appologies for the redundancy.

For the Bally/Astrocade we are releasing in 3rd quarter of 1996 an add on
board that provides up to 64 K of user configurable RAM, EPROM or EEPROM, an
input for inexpensive readilly available keyboard, an output for Centronics
type printer and two serial ports for connecting to a modem or another
computer. We hope to bundle this with Hot-Rod Bally Basic.

Although we are well into the 3rd quarter we still haven't set a price. As
soon as we do we will notify everyone that has requested info.

Jay Fenton (the Bally Home Computer's project manager) has a page @
http://www.communities.com/people/jay/

Lance Squire has the FAQ @ http://www.io.org/~komb1/ballyfaq.txt

I am not aware of any other Bally pages, but I'll probably send out my
crawler before we make our release anouncment. I'll try to remember you
asked and pass you what I find.
