

I don't understand  
the game.

Bilbray  
4/14

Dear Bob,

I've another correction for Simon. And  
There should be a line

11 A =  $\emptyset$

This resets the string to start over.

As I have told you, many people  
have called in response to these  
errors. I am now writing to  
these people to help them with  
other questions and problems.

So if there had not been the  
mistakes, I would never have  
contacted all these other Bally  
users in this area.

Also many of these people now  
know of the user's meeting coming  
up MAY 12 at the Computer Center.  
The attendance is expected to be  
about 50 users.

I recieved this month's (April)  
BYTE and saw an article in "Byte News"  
on page 193 about Magnavox  
Files suit on Microprocessor Video  
Game Patents. Included among  
the manufactures they have filed  
suit against is Bally.

One of the Arcadians who  
called mentioned an article in  
a recent STOCK journal (I don't  
know the name) which states

over)

Important

that Bally will be cutting funding to their home arcade program.

This is said to be because of their casino opening in Atlantic City.

I hope this is not true, but the user sounded like he knew what he was talking about.

I sorry for the mistakes in Simons and hope it did not cause so much trouble. But many users have learned something about debugging and a little about Basic. (Sort of a learning experience)

I will try to prevent further bugs from happening.

Sincerely,  
Brett Bally

P.S. The phone communication did not work.

P.P.S. There are a few other users (about 8) that are interested in finding out more about the executive subroutines and whether or not Bally plans more software cassettes. Any news?

(Sorry about the writing, but I wrote this in a car on my way to ANN ARBOR.)
